Fluoroscan™ InSight
Ultra-fine Detail. Unprecedented Flexibility.
Fluoroscan™ InSight is the original and most sought after mini C-arm on the market. Now the new Fluoroscan InSight mini C-arm is more versatile, efficient and cost effective than ever before.

Designed specifically for orthopedic and other extremity surgeons, Fluoroscan InSight combines tremendous maneuverability, ultra-fine low-dose fluoroscopy images, and automated adjustments that deliver the optimum image every time, for every patient. No other mini C-arm can be customized to meet the demands of all physicians for every procedure.

Hologic continues to set the bar for high quality fluoroscopy imaging with the smallest x-ray focal point in the industry. The Fluoroscan InSight mini C-arm is your perfect extremity imaging system.

The Only System You’ll Need to Perform All of Your Extremity Procedures.

The Fluoroscan InSight mini C-arm from Hologic delivers ultra-fine detail imaging with unprecedented flexibility.

Unprecedented Flexibility for Comfort and Ease of Visualization

The demands of extremity surgery are varied. No matter how challenging the body part or how difficult the position, Fluoroscan InSight will accommodate your needs with extraordinary flexibility.

No more bulky, fixed monitors that require you to orient yourself to them. The Fluoroscan InSight’s lightweight, flat screen monitor can be rotated and positioned with virtually infinite ease to extend into the surgical field.

The articulation of the imaging arm moves with equal flexibility, so the C-arm works as you work — moving effortlessly from anterior to posterior to lateral views — so you get the precise angle that you need. Wherever you position the C-arm, it will stay in that position until you’re ready to move it.

The result is greater comfort for you and your patients and improved visualization in all types of extremity surgeries.

Unlike other C-arms, the Fluoroscan InSight flat panel monitor folds down easily so an operator can safely move the system from one OR suite to another, or from one exam room to another.

Fluoroscan InSight: Better Than Ever
Recent system improvements make the Fluoroscan InSight from Hologic more versatile, efficient and cost effective than ever before. The new performance enhancements include:

- A deeper C-arm to accommodate virtually any hand or foot surgical table and improve maneuverability.
- A redesigned flex arm that increases the articulation range for even greater flexibility.
- A programmable wireless foot switch improves safety and convenience.
- A new locking mechanism to insure the precise approach and angle for virtually any extremity imaging procedure.
- And new software with a full range of image optimization tools with configurable Physicians Preference settings. These tools can be set independently for each doctor or preset for the overall system.

Automated Imaging
Orthopedic surgeons have told us they want the best image quality without instrumentation complexity. The Fluoroscan InSight mini C-arm has advanced imaging automation that compensates for and adjusts to metal, noise, motion, and tissue thickness.

Smart technology
You don’t need to flip a switch or push a button to compensate for metal within the surgical field. Metal-Trac is always working to ensure that pins, bolts, or surgical instruments don’t degrade the image.

Adaptive noise and motion reduction
Fluoroscan InSight automatically adjusts to movement during a procedure, producing a crystal clear image, eliminating blurriness or distortion.

Automatic dose control
With Fluoroscan InSight, you don’t have to worry about dose control. The software automatically adjusts the dosage for the best image quality with the minimum exposure for large and small extremities alike.

Management and connectivity
All Fluoroscan InSight mini C-arms incorporate not only the best imaging technology, but ease of connectivity. Store digital images locally on the hard drive, or export images in multiple formats to PACS, CD/DVD media or a printer. Images may also be exported to a USB device for off-site review and storage.

Smallest focal point for highest visualization
The hallmark of Hologic is ultra-fine detail imaging. Only Fluoroscan InSight offers a 0.045mm focal spot for superior image clarity and detail no other mini C-arm matches.
Saving Time with Advanced Imaging Automation

1. Automated Imaging
   Orthopaedic surgeons have told us they want the best image quality without instrumentation complexity. The Fluoroscan InSight mini C-arm has advanced imaging automation that compensates for and adjusts to metal, noise, motion, and tissue thickness.

2. Smart technology
   You don’t need to flip a switch or push a button to compensate for metal within the surgical field. Metal-Trac is always working to ensure that pins, bolts, or surgical instruments don’t degrade the image.

3. Adaptive noise and motion reduction
   Fluoroscan InSight automatically adjusts to movement during a procedure, producing a crystal clear image, eliminating blurriness or distortion.

4. Automatic dose control
   With Fluoroscan InSight, you don’t have to worry about dose control. The software automatically adjusts the dosage for the best image quality with the minimum exposure for large and small extremities alike.

5. Management and connectivity
   All Fluoroscan InSight mini C-arms incorporate not only the best imaging technology, but ease of connectivity. Store digital images locally on the hard drive, or export images in multiple formats to PACS, CD/DVD media or a printer. Images may also be exported to a USB device for off-site review and storage.

6. Smallest focal point for highest visualization
   The hallmark of Hologic is ultra-fine detail imaging. Only Fluoroscan InSight offers a 0.045mm focal spot for superior image clarity and detail no other mini C-arm matches.
Hologic is committed to addressing the continuum of skeletal health care, from the OR to in-office imaging. Just as we are leading the way in women’s health imaging solutions, we are raising the bar in skeletal health imaging.
